

CRC-32 CHANGER USER GUIDE

To compile and run the program use `make` && `make run` command. Use `make clean` to remove the executable file.

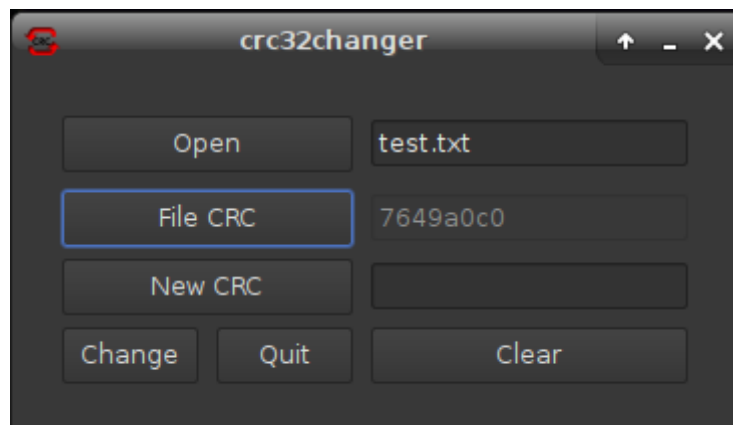

When the program runs you'll get to the program GUI:

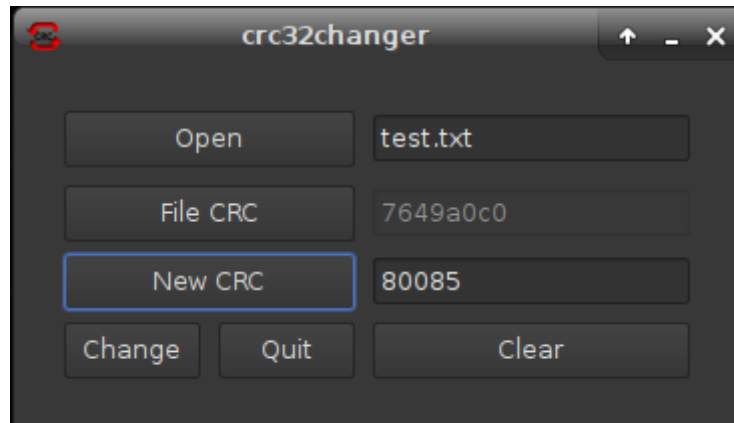

Use 'Open' button to choose the file you want to change:

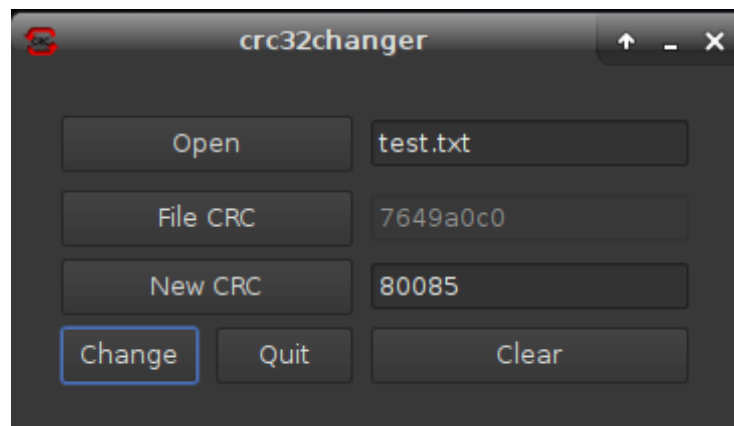

Use 'File CRC' field to get the current value of CRC:

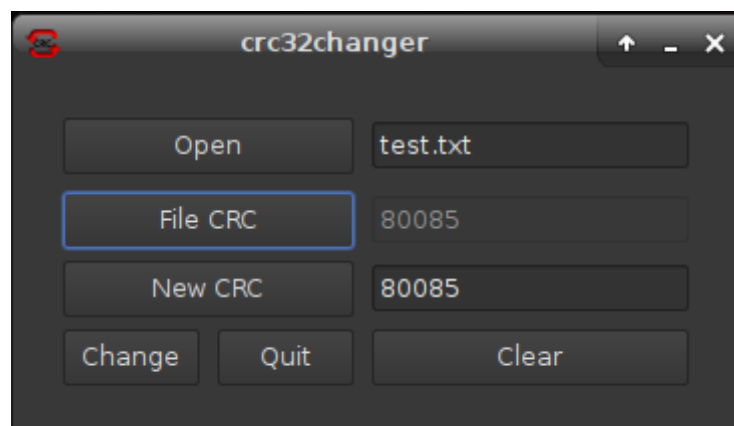

If you want to change that value, you need to input the new one into the 'New CRC' field and click the button:

After that click 'Change' button:

To check the correctness of the change, you can click onto 'File CRC' button again:

Use 'Clear' button to remove all the values from the fields. Use 'Quit' button if you want to exit the program.
